SUMMARY

Senior technical writer and UX writing specialist with 25+ years in enterprise software and deep expertise in healthcare technology. Experienced across the full content spectrum: structured authoring (DITA/XML), in-app guidance and product analytics (Pendo), UI copy, API documentation, release notes, onboarding and implementation content, and AI chatbot content optimization. Proven as a sole contributor owning complete documentation and content strategies across multiple products in complex, HIPAA-regulated environments.

SKILLS & TOOLS

Skills Structured authoring, content reuse, single sourcing, docs-as-code, web-based help, admin and configuration guides, UX writing (screen copy, error messages, tooltips), in-app guidance and guided tours, release notes, onboarding and implementation content, API documentation, EDI X12 transaction mapping, email content design, SME interviews, SaaS B2B enterprise software, HIPAA-regulated environments

Tools Pendo (in-app guides, guided tours, feature tagging, product analytics, user segmentation, in-product surveys), Oxygen XML Author, DITA/XML, MkDocs, Markdown, Zoomin, Figma, Confluence, SharePoint, Jira, Git/GitHub, Postman, Monday.com, Salesforce, Drupal, WordPress, Snagit, Microsoft Word (VBA macro development)

PROFESSIONAL EXPERIENCE

NantHealth | Boston, MA | March 2013–April 2026

NantHealth provides software solutions for the healthcare industry, including Eviti (oncology clinical decision support) and NaviNet (payer/provider collaboration portal serving 500,000+ provider office users).

Lead Content Writer January 2021–April 2026

- Sole writer responsible for all customer-facing documentation across two B2B SaaS products (NaviNet and Eviti). Authored and published end-user help, admin guides, configuration documentation, release notes, and onboarding and implementation content in Oxygen XML. Managed content in GitHub.
- Designed and deployed in-product engagements in Pendo, including guided tours, feature education flows, and contextual help, to drive customer utilization, boost feature adoption, and reduce support volume. Analyzed support case data to identify the most frequently submitted user questions, then created targeted guides and contextual links to surface answers before users contacted support.
- Maintained product mapping and feature tagging in Pendo to enable customer utilization and adoption insights across the product suite.
- Analyzed user interactions for an AI chatbot initiative identifying content gaps and enhancing source material. Collaborated with the development team on synonym mapping to ensure varied user phrasing resolved correctly.
- Identified a UX gap in an oncology treatment plan deviation workflow where treatment plans failing evidence-based guidelines left users uncertain how to proceed. Developed Pendo in-app guidance to address the confusion, then determined the underlying screen needed redesign. Created a mockup, validated with a clinical SME, secured stakeholder approval, and advocated for resolution of a contributing bug — both of which were implemented.
- Identified inconsistent and outdated messaging across 10+ customer-facing emails generated from Salesforce, HubSpot, and the core product. Led a cross-platform redesign initiative to overhaul messaging and visual design across all three systems. Created a Figma tracking page documenting before-and-after designs with linked tickets for each platform, serving as the central project reference.
- Developed a Microsoft Word macro that automatically converted help topic URLs into customer-ready links, eliminating a repetitive manual step and saving significant time across the team.
- Developed Pendo guides and documentation to support a new multi-factor authentication rollout, including critical account reset code collection to prevent users from being locked out.
- Created documentation and Pendo in-product engagement content to support a new Medicare attestation requirement, ensuring customers maintained uninterrupted access to Medicare data within the product.
- Managed multiple content infrastructure transitions — from Confluence and Drupal to DITA/XML, from web help and PDF outputs to an integrated Zoomin for Salesforce Help Center, then back to web help and PDFs. Handled content reorganization, link remediation, and retagging at each stage.

Senior Technical Writer March 2013–January 2021

- Reviewed user feedback daily to identify documentation improvements. Reception of user guides improved by more than 50%; in 2021 the team received more positive than negative feedback on help content for the first time.
- Developed API getting started and companion guides to support NaviNet API sales, implementation, and support.
- Researched, wrote, and maintained complete documentation set for Eviti product, including release notes for each product release. Developed and published Eviti help survey so users could provide feedback directly from each help topic.
- Led full content migration from Drupal and Confluence to DITA XML, rearchitecting content for reuse and single-sourcing. Delivered custom user guides tailored to each health plan's unique NaviNet implementation.
- Worked with UX to write copy for new sign-in and provider self-service workflows and a new partner portal.
- Created detailed configuration guides that business analysts relied on to create client-specific JSON configuration files. Used Postman to call live client APIs and inspect health plan-specific JSON configurations, enabling customized, client-accurate documentation.
- Designed EDI X12 transaction mapping tables across multiple transaction sets (837, 835, 270/271, 278), documenting loop and segment structure, field-level support status, and expected values.

Genzyme (now Sanofi) | Framingham, MA | June 2012–March 2013**Contract Technical Writer**

- Developed paper-based Process Control Strategy (PCS) documents for a manufacturing compliance project, gathering information from batch records and SME interviews.

GE Healthcare | Boston, MA | January 2006–March 2012

GE Healthcare acquired IDX in 2006. Role was within Centricity Business, the revenue cycle management line of business.

Lead Design Engineer / Software Test Engineer

- Designed bundled care software solution identified as a key market differentiator. Served as project lead for a web services integration project at a large academic medical center.
- Interviewed customers and presented concepts, workflows, and screen prototypes to build trust and validate direction on a new product initiative.
- Designer on ICD-10 compliance project (HHS federal mandate). Presented solution internally and at a regional users' conference.

IDX Systems Corporation | Boston, MA | January 1994–January 2006**Lead Technical Writer / Technical Writer & Software Designer**

- Owned complete documentation sets for multiple complex, integrated applications during transition from paper-based to content management system (Vasont/Arbortext).
- Designed and documented features that reduced A/R Days at 100+ customer sites by producing cleaner claims.
- Helped develop online help structure and standards for the company's first Windows-based product.

EDUCATION

User Experience Courses, Bentley University
